KARL STORZ—ENDOSKOPE

APPLICATION FORM

I would like to attend the Portsmouth Transoral Laser Course which is being held on 9 - 11 January 2020.

PORTSMOUTH TRANSORAL LASER COURSE

CPD: Applied for

We would like to invite you to attend our Portsmouth Transoral Laryngo-Pharyngeal Laser Course

Constant progress in carbon dioxide (CO₂) laser technology has resulted in general optimisation of laser beam parameters, such as power, exposure time (milliseconds), emission modality (superpulse and ultrapulse) and the use of micro-manipulators with a focused microspot diameter of less than 300 microns. This in turn has led to reduced thermal damage of tissue and allowed safe application of lasers in laryngeal cancer surgery and phonosurgery, an area where traditionally 'cold steel' instruments have been used.

The Portsmouth Transoral Laser Course is designed to provide the knowledge and skills necessary for the correct use of the CO₂ laser in the treatment of laryngeal neoplasms. The course will include lessons by renowned experts who will illustrate the basic principles, indications and different surgical techniques.

The number of participants has been limited to 15 ENT Consultants and Specialists in training (ST) to enable small tuition ratios. Full immersion training sessions will be held from Thursday afternoon to Saturday, with theoretical and practical demonstration of basic and advanced CO₂ laser and reconstructive laryngeal surgical techniques. The new technique of Narrow Band Imaging will be described and its utility in helping to diagnose lesions of the larynx will be discussed.

We will also discuss the emerging role of transoral excision of oropharyngeal tumours in particular tonsillar carcinoma.

The live surgery will be completed by interactive discussion of the cases and by theoretical teaching of basics in lasers, safety and anaesthetics, surgical anatomy, physiology, radiology, surgery and histopathology.

Hands on sessions with the latest carbon dioxide lasers on animal cadavers and mannequins with vocal cord inserts will improve your ability to perform basic and advanced tumour resections.
